

zero MARINE

ENVIRONMENTAL POLICY

As the UK's first and only Zero Emission charter service our environmental commitments are at the cornerstone of our operation. Naturally, we are committed to compliance with all applicable environmental legislation and other relevant obligations. However, since inception Zero Marine's objectives extend well beyond these statutory requirements and include ambitious, far-reaching commitments to;

- Eliminate the risks of any marine pollution through the development and construction of a pioneering electric fleet, mitigating the need for oils and lubricants, that may otherwise enter the marine environment.
- Adopt exclusively electric vessels to cease the use of fossil fuels entirely.
- Achieved single use plastic free certification from The Green Blue.
- Remove fossil fuels from onboard welfare such as heating and cooking.
- Transition all corporate workwear to sustainable, organic fabrics by 2024.
- Use only BIO based vessel cleaning products from refillable containers.
- Invest in Solar PV at our offices and yard to charge fleet and equipment.
- Replace all power tools with battery operated solar charged alternatives.
- Provide electric and conventional folding bikes to all skippers and crew.
- Travel only by public transport to vessels, in conjunction with the above.
- Communicate to clients and our team the environmental performance of each project and at specific milestones in order to drive awareness, continued discipline to our operating procedures and improvement to them.

Our commitment to bring a step change to the marine sector is absolute, built into the DNA of the business from and our team from inception. This environmental policy was approved by our Directors, is considered daily and reviewed annually.

Paul Clarke

Chief Executive Officer
